

ISO Registered Company

MODEL 1000LP

LOW PRESSURE REDUCING REGULATOR

MODEL 1000LP

OVERVIEW

The Model 1000LP is a high capacity, low pressure regulator used to control downstream pressure between 1 and 30 psig (.07 and 2.1 Barg). Sizes are from 1/2" through 1" (DN15 through DN25).

The 1000LP is the low pressure version of the Cashco 1000HP reducing regulator. The designs are essentially equal, except that the 1000LP has a larger diaphragm area which is required for the lower operating pressures.

The unique internals design allows use in a multitude of applications, including process fluids, that normal pressure reducing regulators can not match.

FEATURES

- Streamlined Flow Path:** Straight-thru flow path reduces internal turbulence and resistance to flow, increasing stability and capacity.
- High Inlet Pressure Range:** Standard construction allows inlet pressures up to 450 psig (31.0 Barg).
- High Outlet Pressures:** Controlled outlet pressure between 1–30 psig (.07–2.1 Barg).
- High Pressure Drop:** Standard construction with extended guiding allows pressure drop up to 450 psid (31.0 Bard). This regulator is routinely applied in severe service conditions.
- Flow-to-Open Plug:** Provides unmatched rangeability – far greater than competitive flow-to-close designs. Highly stable at either high or low flow rates.
- Versatility:** Four available body materials and eighteen trim material selections allow usage in a multitude of various fluids. Optional constructions extend the capability.

LINE SIZES AVAILABLE

1/2" (DN15), 3/4" (DN20), 1" (DN25)

END CONNECTIONS

FNPT, RF FLANGED, BSP, EXTENDED NIPPLES, 14" FACE TO FACE

COMMON APPLICATIONS

INDUSTRIAL GASES, FUEL GASES, SOUR GAS, CHEMICALS, COMPRESSED AIR, SATURATED STEAM, WATER CONDENSATE

DESIGN PRESSURE

INLET: UP TO 450 psig (31.0 Barg)
OUTLET: 1-30 psig (0.07-2.1 Barg)

Body Sizes: 1/2", 3/4", 1"; (DN15, 20, 25).

End Connections: Standard – NPT female.
Opt-31: BSP female.
Opt-30: 150# or 300# RF flanged.
Opt-32: Extended plain end nipples.
Opt-34: 14" Face to Face Flange Dim.

Body/Spring Chamber Material Combinations: Uniform – CI/CI, BRZ/BRZ, CS/CS and SST/SST.
Combinations – CS/CI, BRZ/CI, SST/CI, and SST/CS.
CI = Cast grey iron
CS = Cast carbon steel
BRZ = Cast bronze
SST = Cast stainless steel

See Table 4 for material specifications

Trim Designs: Metal seated or composition seat. Metal or composition diaphragms.
"B_" series designations – BRZ, BR, SST; see Table 6 for materials.
"S_" series designations – SST, CS; see Table 7 for materials.

Body/Cylinder Material Combinations: CI/BRZ, CI/SST.
BRZ/BRZ.
CS/SST.
SST/SST.

Maximum Inlet Pressure: Dependent only on cylinder material and type of end connection (See Table 8):

BRZ – 400 psig (27.6 Barg)
SST – 450 psig (31.0 Barg)

NOTE: 1000LP is a flow-to-open (FTO) design; this places an upper limitation on inlet pressure for a given outlet pressure setting.

For body/cylinder/spring chamber construction with:

any BRZ materials –
-20°to+400°F(-29°to+205°C).
any CI materials –
-20°to+450°F(-29°to+232°C).
all CS or SST materials –
-20°to+600°F(-29°to+315°C).

NOTE: Composition trim materials may lower above ranges.

Outlet Pressure Operating Range: Pressure Containment –
50 psig (3.44 Barg), internal damage will occur.
Max. Operating –
40 psig (2.76 Barg), no internal damage.

NOTE: 1000LP is flow-to-open (FTO) design; this places a lower limitation on outlet pressure setting for some inlet pressure levels.

Metal or Composition Seated Designs:
"B_" series trim designations –
up to 400 psid (27.6 Bard).
"S_" series trim designations –
up to 450 psid (31.0 Bard).

Maximum Pressure Drop: Standard: $\Delta P > 5$ psid (.34 Bard).
Opt-17: $\Delta P = 1 - 5$ psid (.07 - .34 Bard).

Minimum Pressure Drop: Minimum = 1 psid (.07 Bard).

Seat Leakage: Meets ANSI/FCI 70-2.
Metal Seated – Class IV.
Composition Seat – Class VI.

Capacity: See Tables 9 through 13 for flow capacity.
See Table 2 for "Wide Open Cv"; use for sizing of safety relief device.

Range Springs: Epoxy coated steel.

Diaphragm Flange Bolting: Standard: High strength, zinc plated, heat treated steel. For all body/spring chamber materials.

Gaskets: Required for metal diaphragm constructions only; not required for composition diaphragm construction.

Standard:
TFE/Alumina Silicate.

(Not suitable for oxygen service.)

$T_{max} = 450^{\circ}\text{F}$ (232°C).

Opt-45: TFE gaskets for oxygen service or as alternate.

$T_{max} = 400^{\circ}\text{F}$ (205°C).

Opt-46G: Alternate carbon graphite gaskets. $T_{max} = 600^{\circ}$ (315°C).

Painting: Standard: All non-corrosion resistant portions to be painted with corrosion resistant epoxy paint per Cashco Spec #S-1606.

OPTION SPECIFICATIONS

Option -1: CLOSING CAP. A removable ductile iron cap discourages tampering with spring setting. Available only with CI or CS spring chamber materials. Includes a gasket for sealing the closing cap to the spring chamber, a sealing lock nut, and a 1/4" (DN8) NPT female vent connection.

Option -3: MANUAL ADJUSTOR & LOCKING LEVER. Use when frequent spring range settings are required. Adjusting screw has handwheel fixed to end, and locking nut is replaced by a locking lever that is easily loosened/tightened.

Option -12: REDUCED PORT ORIFICE. Used when high inlet pressure negates use of the standard full port orifice. Also used when oversized body is desired to accommodate piping size. Available in metal seated or composition seat materials, in all "B_" or "S_" series trim designations, and in all body sizes. See Tables 10 and 12 for flow capacity in Cv's and maximum inlet pressure.

Option -14: INTEGRAL SEAT. Standard pressed-in seat ring-to-cylinder joint is sealed as a path of leakage by brazing or welding. The procedure also serves as a permanent joint for flow conditions where service conditions are "severe", subject to vibration, or thermal cycling.

Seat ring is silver brazed to cylinder for "B_" series **composition** trim designations, and to 1/2" (DN15) body size cylinders with "S_" series trim designations. For all other body sizes with "S_" series designations the seat ring is welded to the cylinder.

Recommended for all hydrogen or helium applications. Recommended when pressure drop exceeds 300 psid (20.7 Bard).

NOTE: Opt-14 is included whenever Opt-15, stellite seat is specified.

Opt -14 Integral Seat

Option -15: STELLITED SEAT SURFACES. Available with metal seated S1 trim only, and with full port orifice or Opt-12 reduced port orifice. Both plug face and seat ring's seat edge are coated with stellite hard surfacing using a flame spray process. Always includes integral seat ring Opt-14. Required for applications when:

1. Liquid flow is flashing and when both outlet pressure $P_2 \leq 30$ psig (2.1 Barg) and $\Delta P > 50$ psid (3.5 Bard).
2. Steam service when $\Delta P > 300$ psid (20.7 Bard).
3. 2-phase flow (liquid + vapor i.e. "wet" steam) at inlet.

Option -17: PISTON SPRING. Required for applications where pressure drop is less than 5 psid (.34 Bard). Minimizes plug/cylinder frictional effects. 302 SST material only.

Option -25: REMOTE VENTING. Use with hazardous or explosive gases where personnel/equipment safety is at issue when a diaphragm leak occurs. 1/4" (DN8) NPT female connection in spring chamber for piping.

Option -25S: VENT SCREEN: Cap (For Opt-25).

Option -26: DRAIN HOLE. 1/4" (DN8) NPT drain tap with plug in body underside. Recommend use with highly viscous fluids (above 100 centipoise (Cp)) for downstream piping pressure sensing. Plug material similar to body material. Recommended for flashing liquids.

Opt-26 Drain Tap with Plug

Option -27: VISCOUS LIQUID SERVICE. Incorporates special valve plug with drilled openings near the "jet effect" zone to stabilize operation for fluids with viscosity greater than 100 Cp. Brass or SST metal seated trim ONLY.

Option -30: FLANGED END CONNECTIONS. CS or SST body materials only. Flange and pipe nipple materials of same general chemistry as body material. Available as 150# RF or 300# RF flange configurations. Requires lapped joint-type flange on inlet (cylinder) end. Pipe nipples socket welded to body and cylinder. Outlet connection flange is socket weld-type. See Table 8 for lowered P vs T ratings. (Suitable for NACE service with post-weld, stress relief, heat treatment).

Option -31: BSP SCREWED END CONNECTIONS. British Standard Pipe threads per ISO 7/1; used as alternate to NPT ends. Available all sizes and body materials.

Option -32: EXTENDED P.E. NIPPLES. Schedule 80 plain end pipe nipples used for field butt or socket welding into pipeline. Pipe nipples of same general chemistry as body material. Short-threaded pipe nipples seal welded to body and cylinder. Adds approximately 8 inches (200 mm) to the face-to-face dimension of standard unit. Use for socket weld pipe systems.

Option -34: SPECIAL 14" FACE TO FACE DIMENSION FOR FLANGED END CONNECTIONS. See Opt.-30 for standard face to face dimension.

Option -40: NACE CONSTRUCTION. Internal wetted portions meet NACE standard MR0175 for application in sour gas service. Exterior of the unit to not be directly exposed to a sour gas environment, buried, insulated or otherwise denied direct atmospheric exposure. CS/CS or SST/CS body/spring chamber materials ONLY. Acceptable ONLY with S40, S40V, S3, or S3N trim. Not available with Opt-14, Opt-15, or Opt-17.

Option -45: PTFE/SILICATE GASKET. Primarily for oxygen service. Limits temperature range to -20° to +400°F (-29° to +205°C). (A gasket is not required when applying a composition diaphragm.)

Option -46G: HIGH TEMPERATURE GASKETS. CS or SST body/spring chamber materials only. Utilizes carbon graphite gaskets over standard gaskets. Primarily applied at temperatures over 400°F (205°C) or at customer's request; range of -20° to +600°F (-29° to +315°C).

Option -55: SPECIAL CLEANING. BRZ or SST body materials ONLY. Cleaning per Cashco Spec #S-1134 for Oxygen gas Service. **NOTE:** Design Pressure Rating shall not exceed 375 psig (25.8 Barg) when body material is SST and process medium is oxygen.

Option -56: SPECIAL CLEANING. Cleaning per Cashco Spec #S-1542. Not suitable for Oxygen Service.

TECHNICAL SPECIFICATIONS

**TABLE 1
RECOMMENDED PRESSURE DROP
VS. TRIM DESIGN/MATERIALS**

NOTE: Consult Factory with Application Details For ΔP 's > 450 psid (31 Bard)

NOTE: Cashco, Inc. does not recommend metal seated trim on any service where the flow will be dead ended down stream of the pressure reducing regulator.

Fluid	Maximum Inlet Pressure		Operating Pressure Drop Range		Seat Design	Basic Trim Materials	Trim Designation Numbers
	psig	(Barg)	psid	(Barg)			
Liquids (Noncavating)	400	(27.6)	5 - 250	(0.34-17.2)	Soft Seat - All Comp Materials	BRZ/BR	BB, B2, B3, B5, BK

CS/CS/SST SST/CS/SST SST/SST/SST	450	(31.0)	-20 to 600 ²	(-29 to +315) ²	50	(3.44)	-20 to +600	(-29 to +315)

¹ For constructions containing following materials as the body, spring chamber, or cylinder, the pressure vs. temperature limits are based upon:

Material	ASME Specification No.
BRZ	B31.3
CI	B31.3
CS	B31.3
SST	B31.3

² Requires use of Opt-46G, high temperature gasket for temperatures from +450 to +600°F (+232 to +315°C).

³ Internal damage will occur; pressure containment will be maintained.

TABLE 4
MATERIAL SPECIFICATIONS OF
BODY, SPRING CHAMBER AND CYLINDER

MATERIAL	ASTM Specifications
BRZ - cast bronze	B62, Alloy 83600; 85% Cu, 5% Sn, 5% Pb, 5% Zn
CI- cast iron	A126, Class B
CS - cast carbon steel	A216, Gr. WCB
SST - cast stainless steel	A351, Gr. CF8M (cast 316 SST)

Water and Condensate, High Temp. (180-300°F) (83-149°C)	Metal Seat & Diaphragm	S1 , B1, S2

¹ S1 trim is available with stellite faced plug and valve seat (Opt. -15).

² Oxygen service requires specifying Opt-55, and using BRZ or SST body materials ONLY.

³ Specify S40 trim for NACE service.

Note: Trim Designation Nos. in "boldface" are the most commonly used. Cashco, or its representatives may make recommendations or suggestions as to the suitability of certain trims for specific services. These are trims that have been used successfully in the past in similar applications. However, the user has final responsibility for materials selected.

[‡] In accordance with ASME B31.3 "process piping", do not use Cast Iron Body for hydrocarbon or flammable fluid service with inlet pressures greater than 150 psig (10.3 Barg) or temperatures greater than 300° F (149° C).

¹ Available with Stellite faced plug and valve seat (Opt-15). Includes a screwed in seat cone.

* Use for NACE service.

NOTE: Cashco, Inc. does not recommend metal seated trim on any service where the flow will be dead ended down stream of the pressure reducing regulator.

¹ Indicated outlet pressure limits are those to contain overpressure conditions; such overpressure should not cause internals damage. It is recommended that pressure safety devices – safety relief valve or rupture disc – have their setpoint relief pressures at 120% of the UVRS (UVRS = “Upper Value of Range Spring”). Example: For a 12–30 psig (.83–2.1 Barg) range spring, the safety device should be set to relieve at 120% x 30 psig = 36 psig (2.5 Barg).

² For all material/trim combinations, the 1000LP diaphragm pusher plate and rocker arm mechanical internals design are the limiting factors.

³ Pressure integrity will be maintained up to 150 psig (10.3 Barg). Up to 40 psig (2.8 Barg), no internals damage will occur; above 45 psig (3.1 Barg) internals damage will occur.

**TABLE 9
Cv – FLOW CAPACITY**

FULL PORT – COMPOSITION DIAPHRAGM

Based on 400 psid (27.6 Bard) max pressure drop limit for composition seat,
and on 450 psid (31.0 Bard) for metal seat.

- NOTES:**
1. Where "HI P1" is indicated, the inlet pressure exceeds the limit established in Table 9.
 2. Where "HI P2" is indicated, the maximum outlet pressure is exceeded.
 3. Where "SONIC" is indicated, flow will be approximately the last indicated value in the column above "SONIC". The outlet velocity with Schedule 160 pipe has reached sonic velocity of 1118 fps. Additional flow cannot be obtained, and pipeline velocity is in excess of customary pipe velocity design limits.

Metric Conversion Factors: psi / 14.5 = Bar; SCFH / 35.31 = Sm³/Hr; SCFH / 37.32 = Nm³/Hr
