<b>NOTES:</b>		
1) Trim designation numbers in bold are used most common and have been successfully applied in similar applications. Consult factory for the suitability of certain trims for specific services; however, the end user has final responsibility for materials selected.		
2) Metal seated trim is not recommended on any service where the flow will be dead ended down stream of the pressure reducing regulator.

**NOTE:** Where "HI DP" is indicated, the actual pressure drop has exceeded the recommended limits of Table 2.

Where "SONIC" is indicated, outlet velocity with Schedule 40 pipe exceeds sonic velocity of 1118 fps. Additional flow cannot be obtained, and pipeline velocity is in excess of customary pipe velocity design limits. Flow will be approximately the last indicated value in the column above "SONIC".

Recommend use of Opt-4 Stabilizer.
